

MyHeritage, why should I check it out?

A website that has features that others do not such as:

Consistency checker! Do you have a family tree from cousin Kathy that you'd like to know if it's "all there" or it all "works"? Family trees in MyHeritage are checked for consistency. They give you a list of any flags they see and let YOU confirm or reject it.

Family tree BUILDER. This is a genealogy program that you download to your computer. This program syncs with the website so you do not have to make changes in two places (your computer & a website).

DNA tools! Three ways to view your matches (Smart Matches, Instant Discoveries, and Record Matches) along with new tools to help you even more.

See the types of records available and how easy it is to import trees (i.e., gedcoms) & DNA tests.
